Potamogeton pectinatus. Abundant in Hong Kong
Creek & in Lake Hong Kong - also *Ruppia*
maritima - *Laminella patula* - *Scirpus*
fluitans. - *Potamogeton* - in deep water and
also in the margin of the Lake. - *Sagittaria*
arifolia abundant.

Lake Wai-kwan: - *Potamogeton pectinatus* - *Ruppia*
maritima - abundant - *Scirpus fluitans* -
Ruppia maritima - *Leptocarpus peruvianus* - *Sagittaria*
arifolia - *Sagittaria kinkii* - *Scirpus fluitans* -
Scirpus fluitans -

Lake Wai-kwan - *Utricularia* - *Ruppia*
maritima - *Scirpus fluitans* -

Cambridge - *Utricularia* - *Sagittaria*

Waukegan

The two creeks leading from Lake Michigan into the Waukegan have their banks densely covered with a vegetation composed of *Sagittaria latifolia*, *Scirpus maritimus* & *S. lacustris*, *Phormium tenax*, *Cladium nuttallianum*, *Veronica perfoliata* & *S. sphaeroloba*, *Polygonum minus*, *Eleocharis acicularis*, etc. Of fluviatile plants, *Potamogeton natans* was the most abundant, other species were *Utricularia subsericea*, *Potamogeton zosterifolius*, *Chara* & *Najas*, several species, growing in the lake in a north easterly direction to the Red Bluff. The littoral *Leptocarpus foliosus* was noticed in great abundance. Small specimens of *Desm. kirkii* were seen in the shallow water of the Lake - as also a curious *Myriophyllum*. *Pectia angulata*, *Sparganium angustifolium*, were not uncommon on the shore. On the extreme eastern side of the Lake *Salix sedicans* was abundant. On the promontory separating the northern from the southern part of the Lake *Deschampsia cespitosa* was most abundant.

Whangape

Whangape Creek is clothed on its banks with the same original plants as the creeks from Waitane, but has a far more copious florivatic vegetation. *Potamogeton natans* was excessively abundant, as also *P. ochraceus*. *P. pectinatus* is also ^{common} abundant towards the upper part of the creek. Charae & Nitellae of several species in many places filled the bed of the creek. A curious feature is the large number of oldeel-weirs, which are built of large stones driven into the bed of the creek, so the weir taking the form of the letter V. with the apex pointing down stream; a small opening is left in the centre just wide enough to allow boats to pass through. Emerging into the lake, *Puffin* Waitane is abundant in many places, the flower peduncles being often several feet long. - *Saxatilis kirkii* is abundant, - that of small size. - *Eryngium* n. sp. - with narrow linear leaves - was abundant in

Shallow water along the margin of the lake; *Ranunculus limosella* was picked in several places. *Sagittaria* appeared to be comparatively common. *Leptocarpus* was again met with, but was not very abundant at the north end of the lake. Other plants seen were *Brickellia angulata*, *Ranunculus macrocarpus*, *Eleocharis acuta*, *Cladium paniculatum*, *C. articulatum*, *Eleocharis sphaeroloba*, *Carex setidola* - (extremely abundant), *Agrostis amula*, *Sagittaria latifolia*, *Lupinus angustifolius*, etc.

In shallow places on the marshes, especially near the entrance of the Maramara, *Lepiloma Pissini* was not uncommon. It was now in full inflorescence.

Porongia

Between the mountain & Alexander Pass east hills,
with *Samolus guttifer* plus with *Keapo*, *Cladonia*, and
Psidium. *Samolus florivatus* and a *Carex* - *C. Colensoi*
were picked near the Mingo Bridge. *Hypericum perforatum*
was picked fully established. Lower part of the forest,
towards the base of the mountain is principally
composed of Tawa - fine full grown tall specimens
mixed with the Tawers are *Tetrathera*, *Santalum*,
Dysoxylum Rewarewa, *Panax arboreum*, undergrowth
of Fern trees, *Alseuosmia*. As the mountain is
surrounded *Weinmannia racemosa* - *Sawdonia*
superba was picked in several places

Prongia

Ridge connecting the Alexandra Mountains with the
Peak proper one narrow well-lake - vegetation
dwarfed. *Habenaria*, *Saxifraga*, *Hemerocallis*, *Cypripedium*
pubescens *bracteatum*, *Trillium* (often 10 ft high
6 in diam). *Gratiola*, *Lithospermum*, *Polygonum*, *Geranium*
Cypripedium pubescens - underground *Galea*
n. sp. - *Orchis*, *Lomatium* *procumbens* var. *minor*,
Lupinus *monanthus* abundant - *Callispermum* occasionally
met with.

Perongia

*Plantae in the highest peak. Cordylus, murex, small
 trees, now seen above 10 ft. - all on the rocks. Phormium
 colerium, Coprosma petiolatum, Mammillaria caespitosa
 Lemna pumila, var. minor. Cordylus kaulian,
 Hypochaeris radiata (naturalized). Rubus australis, f.
 Mammillaria sylvicola. Fraxinus antipodum. Ranunc.
 Colerium. P. Sinclairii. Juniperus coriata. Coprosma
 laevis. Daphniphyllum laevis. Podocarpus latifolius. Phacelia
 laevis. Lycopodium pumilum. Fuchsia exaltata.
 Fraxinus latifolia. Epilobium pumilum. Ranunc. alpinus.
 Platanus major. Salix. Daphniphyllum polyanthes.
 Coprosma pumila. Rubus. Mammillaria. Rubus f.
 Daphniphyllum laevis. Juniperus coriata.
 Lycopodium pumilum. Mammillaria sylvicola.*
